PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in SQL, Python, Power BI, Snowflake, and Excel, specializing in ETL/ELT workflows, dashboard development, and business intelligence reporting. Built end-to-end analytics projects across Food Delivery, Banking, and HR domains, turning raw data into actionable, KPI-driven insights.

TECHNICAL SKILLS

- Databases: SQL, MySQL, Snowflake — Joins, Aggregations, CTEs, Subqueries, Window Functions, Query Optimization
- Data Visualization: Power BI, Tableau — DAX, Data Modeling, Dashboard Design, KPI Reporting
- Data Engineering: ETL/ELT pipeline development (SQL, Snowflake) — Extract, Transform, Load; Incremental Load concepts
- Programming: Python (Pandas, NumPy) — data cleaning, EDA, automation
- Tools: Microsoft Excel (Advanced), Power Query
- Analytics: Data Cleaning, Exploratory Data Analysis (EDA), KPI Reporting, Business Intelligence
- Concepts: Data Modeling, Data Quality, Data Governance basics, Agile methodology

PROJECTS

Food Delivery Business Intelligence Dashboard | SQL, Snowflake, Power BI

- Engineered an end-to-end ETL pipeline in Snowflake and wrote advanced SQL (JOINS, CTEs, window functions) to analyze 36,000+ orders across 200 customers and 30 restaurants, tracking ₹3.16M in revenue
- Segmented customers into Low, High, and VIP tiers by monthly spend to support targeted marketing and retention campaigns
- Built an interactive Power BI dashboard with DAX measures to track revenue trends and top-performing restaurants across 5 city markets, informing revenue optimization strategy

Bank Customer Churn Analytics | SQL, Power BI, Excel

- Analyzed 10,000+ customer records spanning \$765M in account balances to uncover churn drivers across demographics, credit score, tenure, and balance
- Built an interactive Power BI dashboard with DAX-driven KPI cards revealing a 20% churn rate (2K of 10K customers) against an 80% retention base
- Developed a customer-level risk-scoring view to flag high-risk accounts, driving data-backed retention recommendations for high-value segments

Employee Attrition Analytics Dashboard | Power BI, Excel

- Cleaned and transformed workforce data for 1,470 employees in Power Query into a reliable model, then built a Power BI dashboard surfacing a 16.1% attrition rate (237 exits)
- Identified key attrition drivers — Life Sciences staff, low job satisfaction, frequent travelers, and overtime-working entry-level hires
- Pinpointed the 26–35 age group as the highest-attrition segment, equipping HR stakeholders with targeted retention insights

College Bus Management System | PHP, MySQL

- Designed and maintained a relational database (MySQL) for students, routes, and drivers — reinforcing data modeling and SQL fundamentals
- Built a structured web-based system to manage and query data, improving data organization and accessibility

PROFESSIONAL DEVELOPMENT

Deloitte Australia Data Analytics Job Simulation | Forage, June 2026

- Completed a virtual job simulation focused on data analysis and forensic technology; built a Tableau dashboard and used Excel to classify data and draw business conclusions

EDUCATION

Bachelor of Computer Applications (BCA)

Kongu Arts and Science College | CGPA: 8.5

CERTIFICATIONS

SQL (Basic) — HackerRank (2026) | Python for Data Science — IBM (2025) | Python & Relational Databases — IBM (2025) | SQL & Database Design — Scalar (2025) | Python Programming — Udemy (2025)

KEY COMPETENCIES

Analytical problem-solving • ETL pipeline thinking • Data-driven decision-making • Stakeholder communication • Quick learner • Cross-functional collaboration
